

**Sustainable into the New Year**

In the reflective Advent season, when we think of the newborn Christ Child in a wooden manger surrounded by hay, we recognize the power of natural materials. Our sustainable enrichment provides your animals with an engaging environment and at the same time stands for responsibility and respect for nature – working towards a sustainable future for our planet.

## Raw Materials from Sustainable Cultivation

The SAFE® enrichment is made from 100% natural raw materials. Only selected, untreated wood from sustainably managed, PEFC-certified forests is used. This not only supports the local economy but also ensures shorter transportation routes, resulting in a lower environmental impact.

## ZERO-Waste Production

Our processes are designed to utilize 100% of the raw materials. Everything that results from production gets a second chance. By-products created during production are processed by our industry partners and are used, for example, in the manufacture of modern pencil alternatives.

*The SAFE®-team wishes you and your animals a cozy and Merry Christmas and a Happy New Year!*
